# ENERGY EFFICIENCY PROGRAMS BULLETIN

## 2023 program launch

With the end of 2022 behind us, we are actively accepting new project submissions for program year 2023. The programs are reaching goals faster than ever, so don't hesitate to contact us about future projects you are considering for next year.

## Project spotlight

### STEWART'S GROCERY STORES

Stewart's Grocery Stores in Sweeny and Brazoria recently completed major refrigeration retrofits at both locations. Upgrades included new ECM evaporator fan motors, door heater controls, evaporator fan controls, and zero energy refrigerator doors. These upgrades are expected to save Stewart's Grocery Stores over 62 kW during peak demand and 310,000 kWh annually. Stewart's also paired their refrigeration measures with a full LED lighting upgrade. The combined project measures are guaranteed to help Stewart's achieve significant energy usage savings for years to come.

### TEXAS CITY ISD

For outstanding participation in the 2022 SCORE Program, Texas City ISD earned over \$67k. Coupled with their participation in the commercial Load Management Program, that's a total of over \$107,000 in cash incentives.

## Benchmarking and energy master planning

Have you ever wondered how your building's energy usage compares to similar ones in the region? Or perhaps you need assistance quantifying which of your facilities has the greatest need for improvement? An energy performance benchmark is a great tool to help you get started!

After a custom benchmark report is created, you will be provided with an updated energy use index, energy cost index, and an ENERGY STAR® Portfolio Manager score for each of your buildings. Contact us to find out more about this service that is offered to TNMP commercial customers at no cost.
